ABOUT

Pig Inu (PIG) is uniquely designed token and its DeFi services deployed on Polygon (MATIC) Network.

Smart contracts:

- **Token**
- **Presale**
- **Staking pools**
- **Airdrop**

Tokenomics:

- **Total supply:** 10,000,000 PIG
- **Transaction fees:**
 - **Dev wallet fee** - 3%
 - **Burn fee** - 2%
- **Transaction fees exceptions:** Presale and Airdrop

PIG INU

LAUNCH

Total supply is redistributed to 3 smart contracts:

- **Presale contract** – 7,500,000 PIG
 - max. 5,000,000 for buyers (presale price: 1 USD / PIG)
 - max. 2,500,000 for liquidity (initial price: 2 USD / PIG)
 - unsold tokens from are burned
- **Airdrop contract** – 500,000 PIG
 - will be available only for wallets with balance at least **10 MATIC** or more for security reasons
 - tokens not distributed during airdrop period are burned
- **Staking contract** – 2,000,000 PIG

PIG INU

CONTRACTS AND ITS PHASES

- **Presale:**

- **Deposit period** – Investors can buy **PIG** tokens for initial price **1 DAI / 1 PIG** for limited time period of **30 days** and wait until this period is over.
- **Claim period** - right after deposit period is over, investors can claim their **PIG** tokens for their deposited **DAI**. This period lasts for **30 days**. When the first investor claims their **PIG** tokens, the liquidity for **PIG / DAI** is created automatically from 50% of deposited **DAI** tokens from all investors for initial price **2 DAI / 1 PIG**, the other 50% of deposited **DAI** tokens goes to developers' wallet for marketing and development purposes.
- **After claim period is over** – all unclaimed **PIG** tokens are burned.

- **Airdrop:**

- When the Presale deposit period is over and liquidity is created, the airdrop starts. Anyone can claim **1 PIG token per unique wallet address** for limited time period (**30 days**).
- After this period is over, no one can claim **PIG** tokens anymore and undistributed **PIG** tokens are burned.

- **Staking pools:**

- Anyone who has their **PIG**, **PIG-DAI LP** or **DAI** tokens, can stake any amount of it in staking pools. They can withdraw them anytime. All the staking pools emit **0.1 PIG** per block until the pool contract balance is drained. These tokens are redistributed to all stakers depending on their share in staking pools.

PIG INU

ROAD MAP

- **Phase 1:**
 - Project launch
 - Website and whitepaper release
 - Initial marketing
 - Presale - deposit phase – **30 days**
 - Unsold tokens burned after deposit phase is over
- **Phase 2:**
 - Presale – claim phase – **30 days**
 - Initial liquidity created from presale deposits
 - Airdrop launch
 - Staking pools launch
 - Unclaimed tokens from presale burned after claim phase is over
 - Marketing and awareness push

FUTURE PLANS

- Create a decentralised **gambling games** (dice, wheel of fortune, roulette etc.), where you can bet **PIG** tokens and win
- Create an **NFT game** where you can buy NFTs for **PIG** tokens
